

Install the Paraloom Plugin

Claude Desktop · about 5 minutes · no terminal needed

Before you start: you need **Claude Desktop** on a paid plan (Pro, Max, Team, or Enterprise) and a **Paraloom login**. Download the plugin file `paraloom-plugin.zip` from github.com/metrifi/paraloom-plugin (in the `dist` folder) and save it where you can find it.

INSTALL IN 6 STEPS

- 1 Open Claude Desktop and go to `Settings`**
Click your name or the gear icon to open Settings.
- 2 Open the `Plugins` section**
In the Settings sidebar, choose Plugins.
- 3 `Add` → `Upload plugin`**
Click Add, then choose "Upload plugin."
- 4 Drop in `paraloom-plugin.zip` and click `Upload`**
Select the zip you downloaded. It installs as "ready to use."
- 5 Open the `Connectors` tab and click `Install` next to **Paraloom****
This connects the plugin to your Paraloom data. Installing the plugin and connecting Paraloom are two separate steps — this is the second one.
- 6 Sign in to Paraloom when prompted**
A window opens to app.paraloom.ai — approve the sign-in. This happens once.

You're ready. Start a new chat and type `/paraloom:start`, or just say "run an experiment for <team> on <topic>." If a chat you already had open doesn't see the plugin, fully quit Claude (Cmd-Q) and reopen it.
